

## Call for papers (CfP) of the 2018 DGON Inertial Sensors and Systems (ISS) Symposium Gyro Technology

You are kindly invited to contribute a scientific paper to the symposium on **Inertial Sensors and Systems**, which will be held in Braunschweig, Germany **at 11 and 12 September 2018**.

An overview of the **important dates** as well as the **author information** can be found at the [Information page](#).

### Scope

At this symposium the latest state of inertial sensors and navigation systems as well as gyro technology will be presented. This includes applications of this technology, the development of new systems, components and test procedures as well as investigations on cost and marketing aspects.

As modern systems for navigation, localization and guidance are increasingly making use of aiding data provided by additional non-inertial sensors, these topics will be focused on by the conference with growing interest. Therefore, also papers covering hybrid systems will be highly appreciated, which fuse data from inertial sensors with that from GNSS, visual, infrared, radar or other sensors.

We are looking forward to welcome you at the Inertial Sensors and Systems 2018 in Braunschweig.

### Contact

If you have any queries or need any further information please feel free to contact us.
