ABOUT THE COVER . . .

A World War I U.S. Army program, under the direction of Charles F. Kettering (of General Motors), developed a missile called the *BUG*, which was powered by a 40 horsepower Ford engine. The *BUG* was tested in late 1918, and radio control was incorporated into a later design; but all work was dropped as the war effort wound down following the November armistice.

IEEE AEROSPACE AND ELECTRONIC SYSTEMS SOCIETY

The Aerospace and Electronic Systems Society is a society, within the framework of the IEEE, of members with professional interests in the organization, design, development, integration and operation of functional systems for space, air, ocean or ground environments. These systems include, but are not limited to, navigation, avionics, spacecraft, aerospace power, radar, sonar, telemetry, defense, transportation, and command and control. All members of the IEEE are eligible for membership in the Society and will receive this *Magazine* and the *Transactions* upon payment of the annual Society membership fee.

The Society Board of Governors, Organization, and its Committees will be found on cover 3.
